## STANDARD FQUIPMENT

| Starting motor and alternator battery charger                 |
|---|
| Dry air filter with removable element                         |
| Radiator for engine cooling                                   |
| Water preheating system                                       |
| Protection for fan and moving parts                           |
| Exhaust gas silencer  |
| Built-in fuel tank 120 l                                      |
| First filling oil   |
| Skidbase with antivibrating shock-absorbers                   |
| Lead type batteries with cables and tray                      |
| Lifting devices   |
| 4-pole circuit breaker in fixed configuration, manual control |
|   |

#### Rating according ISO 8528

### Prime Power (PRP)

It is defined as being the maximum power which a generating set is capable of delivering continuously whilst supplying a variable electrical load when operated for an unlimited number of hours per year under the agreed operating conditions with the maintenance intervals and procedures being carried out as prescribed by the manufacturer. The permissible average power output over 24 h of operation shall not exceed 70% of the prime power. A 10% overload capacity is available for a period of 1 hour within a 12-hour period of operation.

conditions, for which the generating set is capable of delivering for up to 500  $\rm \ddot{h}$  of operation per year (of which no more than 300 for continuative use) with the maintenance intervals and procedures being carried out as prescribed by the manufacturers. No overload capability is available.
